KULKA AI

The four levels behind a ROM

Gross square feet is level one, not the whole system. Pricing moves through four levels of detail, never past what the estimator actually gave it.

Sample request, as spoken

We want to build a 200-unit building with 150 three-bed two-full-bath units, 35 two-bed one-full-bath one-powder-room units, and 15 studios with one full bath. 70 units will have walk-out balconies. Two buildings, each with two elevators. Building 1 kitchens get pot fillers. Building 1 full baths get two sinks.

1 Project questions answered

Estimator, in real time

Units **200 — 150 3BR/2BA, 35 2BR/1BA+powder, 15 studio** · Buildings **2** · Elevators **4** · Balconies **70**

Bldg 1 spec **Pot fillers, double lavs**

2 Design & engineering

AI — derived, not guessed

Electrical service	Insulation R-value	HVAC tonnage	Elevator type	Sprinkler system
NEC 220 load calc	IECC zone table	SF-per-ton rule	Travel distance	Construction & stories

3 Four levels of pricing detail

Each trade prices at whichever level is actually known

LEVEL 1 **Area.** Square feet. Every trade's fallback lump, derived from unit mix × SF per unit type.

Framing & shell · **Electrical** · **HVAC** · **Plumbing rough-in** · **Fire sprinkler** · **Roofing** · **Foundations & slab**

LEVEL 2 **Counts.** Whole objects at building or unit scale — what the estimator actually said.

200 units · **2** buildings · **4** elevators · **70** balconies · **200** kitchens, one per unit

LEVEL 3 **Points or spec.** Inside a room, or a chosen option — finer than a whole object.

350 full baths (150×2 + 35 + 15) · **35** half baths · **1,120** fixture points · **Double lav** Bldg 1 full baths · **Pot filler** Bldg 1 kitchens

LEVEL 4 **Material & labor.** Below the threshold — never asked for.

Accepted only if a file or a sub's own quote already carries it. Nothing here is guessed at just to fill the level.

A level-2 or level-3 line can be a breakout of a level-1 lump, not an add-on. Kulka's own electrical files already price elevator wiring inside the one flat $/SF lump. A level-2 "elevator wiring" block carved out of that lump doesn't add to the total — it only becomes a real addition once a benchmark exists net of it.

ONE ELEMENT, FOUR TRADES

"4 elevators" prices across every division it touches, from one count

14 Elevator car ×4 · 26 ↪ Wiring & feeder, carved from Electrical · 22 ↪ Pit sump, carved from Plumbing rough-in · 03 ↪ Hoistway & pit concrete, carved from Foundations

The range narrows with every level actually known — illustrative shape, not a measured curve. No project needs to reach level 4 to be priced; it just stops narrowing there.

Levels, elements, and the breakout rule are the established design from the LA-720 level board, not new here — this sheet restates them alongside stages 1 and 2.
